Faisal Zafar

faisalzafar781@gmail.com — +92 308 290 5974 — linkedin.com/in/faisal-zafar — github.com/FaisalZafar781

Profile — Software Engineer with 2+ years of experience delivering cross-platform mobile and web applications across mobility, logistics, bioinformatics, and cloud automation domains. Proficient in Flutter, Django, FastAPI, Python, and AWS, with hands-on expertise in security hardening, observability, DevOps pipelines, and scalable API design. Passionate about building robust, maintainable systems aligned with business objectives.

Education

NUST - National University of Science & Technology **Islamabad, Pakistan — 2024**
Bachelor of Engineering in Computer Engineering

Technical Skills

Languages Python, Dart, SQL, HTML5, CSS
Frontend Flutter, ReactJS, Angular
Backend Django, FastAPI, Node.js, Flask
Cloud & DevOps AWS (ECS, ECR, S3), Docker, CI/CD, Terraform
Security OAuth2, JWT, CSRF, Flask-Talisman, OWASP, Rate Limiting
Databases PostgreSQL, MongoDB, MySQL, Redis
Observability Sentry, OpenTelemetry, Prometheus, Structured JSON Logging
Tools Git (GitHub, GitLab, Bitbucket), Postman, Jira, Docker Compose
AI / Data OpenAI API, Pinecone, Pandas, Numpy, Matplotlib

Experience

Stack Pinnacle **Feb 2025 – Present**
Software Engineer — Flutter, Angular, Python, AWS, Node.js, Flask

- Contributed to 4+ production-grade projects across mobility, logistics, bioinformatics, and cloud automation, collaborating in cross-functional agile teams with Git feature-branch workflows, code reviews, and CI pipelines.
- Built **SwyftBooking**, a multi-module booking platform (rideshare, freight, travel, accommodations), developing responsive Flutter UIs and multi-role booking flows with real-time tracking via **Google Maps** and WebSocket-based updates, improving navigation responsiveness by 30%.
- Led automation for **CIC – Company in Clouds**: engineered Python workflows to extract, transform, and map complex schemas from Excel and PDF sources, generating standardised Excel outputs packaged as ZIP files — cutting manual processing time by 40%.
- Hardened **Legionella Web**, a Flask-based bioinformatics platform, across security, observability, and DevOps: applied CSRF protection, SQL injection mitigation via ORM/parameterised queries, **Flask-Talisman** security headers, secure session cookies, rate limiting on auth/upload paths, and route-level input validation — reducing vulnerability surface by 40%.
- Integrated **Sentry** and **OpenTelemetry** APM instrumentation with Prometheus metrics (request latency, HTTP error counters, business logic metrics); configured a **/health** endpoint with DB and Azure AD connectivity checks and a Dockerfile healthcheck — improving observability by 35%.
- Established structured JSON logging with environment-driven log levels, data access logging, and compliance logging for data retention policies, migrating from file-based to centralised logging architecture.
- Automated local environment setup via scripted Makefile workflows and environment variable architecture; managed Trivy-driven container vulnerability fixes and GitHub-driven dependency updates, maintaining zero critical CVEs.

Techup-24 **Nov 2024 – Jan 2025**
Flutter Developer — Flutter, Firebase, Google Maps

- Built **Brodgram**, a sports event management app supporting event hosting, participation, and ticketing with real-time sync, reaching production deployment within 2 months.
- Integrated **Google Maps** for event location rendering and **Firebase Realtime Database** for instant cross-device updates, reducing data latency by 25%.
- Adopted **Provider**-based state management and delivered user profile and settings modules on schedule.

Projects

Lesson Planner GPT
Django, ReactJS, Pinecone, OpenAI API

- Built a GPT-powered web app for AI-assisted lesson planning featuring an “Honest Mode” for transparent model responses and dynamic prompt construction.
- Engineered **Pinecone**-based semantic search for persona-driven customisation, reducing irrelevant response rate by 30%.
- Developed a **Django** backend for chat history, authentication, and real-time processing; crafted a responsive **ReactJS** frontend with chat UI and saved plans management.
